EDUCATION

B.S.E Computer Science, Math Minor **August 2023 - May 2027**

- University of Michigan, Ann Arbor, MI, GPA 3.71/4.0, ACT: 36
- Relevant Coursework: Data Structures and Algorithms, Operating Systems (6 cred), Computer Organization, Proof-Based Linear Algebra, Probability, Statistics, Economics (Macro and Micro)
- Extracurriculars: Girls in Electrical Engineering and Computer Science, Kappa Theta Pi Technology Fraternity

EMPLOYMENT

Capital One, *Software Engineering Intern,* Chicago, IL **June 2025 - Present**

- Designed a cross-team application to read in uploaded JSON schemas and output download links to test data to the magnitude of millions of rows. Bridged the gap between data producers and consumers, reducing time lost and risk.
- Leveraged Agile practices and CI/CD to build a backend API that parses schema to communicate with DynamoDB, S3, and SQS. Built state machine and queue system to run jobs in a custom designed pipeline.

G2, *Student Researcher,* Ann Arbor, MI **January 2025 - Present**

- Redesigned G2's software reviewing system using large language models to streamline the review writing process.
- Prioritized dynamic question selection, editing and content generation assistance, and higher completion rates by 10%.

Bidgely, *GenAI Intern,* Los Altos, CA **May 2024 - August 2024**

- Collaborated with the co-founder of a data analytics energy company serving SMBs, enhancing operational efficiency and optimizing HR processes through automation. Utilized data processing in Python to transform customer energy metrics survey into a conversational, AI-based web application to improve completion rate and data management practices.
- Integrated 380 Document360 documentation articles with Glean search interface by leveraging indexing and REST APIs with company servers. Created custom LLM-using chatbots to increase in question/answer accuracy by 30%.

Glide, *Software Engineering Intern,* Virtual **July 2023 – September 2023**

- Worked in Agile environment for high-growth fintech startup (raised $4.5 million from Pear VC, celebrities, and more) directly under chief executive officer and chief technology officer, working on the credit union onboarding product.
- Formulated summarization and analysis queries using SQL with AWS RDS database on onboarding data from multiple customers, using results of queries to optimize completion rate by identifying user roadblocks.

DPR Construction, *Data Analytics Intern,* Redwood City, CA **June 2021 – August 2021**

- Visualized data on California wildfires under the head of data analytics using Python and Matlab. Analyzed patterns using linear regression to propose recommendations for statistically safer construction sites. Implemented automated pipeline to take in public environmental datasets and update internal dashboard through Excel for automated analysis.

PROJECTS

Star Journal, *Full Stack Application* **May 2025**

- Developed a cross-platform mobile application for stargazing journaling using React Native with Expo framework, implementing file-based routing with Expo Router for seamless navigation. Built a comprehensive state management system for persistent data storage to create, edit, and delete journal entries offline.
- Integrated native features including DateTimePicker, haptic feedback, and image manipulation. Built responsive UI elements with React Native Stylesheet, featuring custom navigation, form validation, and dynamic content.

Kappa Theta Pi, *Life App Dev, Director of Women's Empowerment* **August 2023 - Present**

- Enhanced the calendar feature by adding event filtration by category and integration with Google Calendar. Developed a secure dev page to add up to 10 events simultaneously. Refactored member family tree of 250 people to support a dynamic structure, mapping to Firebase for data management.
- Built a resource database of internships, fellowships, and scholarships for women in technology. Organized networking and social events focused on building community.

Spark Project Team, *Software Engineer* **August 2023 - December 2024**

- Devised a bike-compatible software program utilizing C++ and real-time data processing frameworks to display relevant race data to drivers and pit crews, facilitating informed decision-making and reducing race times.
- Conducted in-depth analysis of race data, identifying 5 efficiency improvements to enhance team performance.

Awards: Fall 2023, Winter 2024, Fall 2024 COE Dean's Honor List, University Honors

Skills: C++, AWS, Golang, Python, Java, HTML/CSS/Javascript, SQL, Git, Jupyter Notebook, Excel, Docker, Dart, Angular
